SUMMARY

Self-taught Backend Developer with 4 years of experience building PHP/Laravel APIs and admin panels. Contributed to 7+ production platforms and can own features end-to-end, from technical design and implementation to testing and production support.

SKILLS

Languages & Frameworks: PHP, Laravel, Livewire, JavaScript

Backend Development: RESTful APIs, Authentication & Authorization, Laravel Jobs & Queues, Events & Broadcasting, Database Design

Databases: MySQL, PostgreSQL

DevOps & Tools: Docker, Git, Linux, Postman, Cursor (AI-assisted development), phpMyAdmin

Frontend: HTML5, CSS3, Tailwind CSS

Practices: Clean Code, SOLID Principles, Design Patterns, MVC Architecture, Unit Testing

EXPERIENCE

Backend Developer - Raymand Kara Data Architects

Tabriz, Iran | Jun 2022 - Apr 2026

- Built and maintained 4 client-facing admin panels and RESTful APIs in Laravel across 3-5 concurrent client projects, giving each client independent control over day-to-day operations.
- Implemented authentication and authorization flows and used Laravel jobs and queues for background processing across most client projects.
- Used Docker with MySQL and PostgreSQL environments to standardize development setup and reduce environment-related issues.
- Documented and tested API endpoints with Postman across every client project, giving the frontend team a shared, reliable reference for integration.
- Resolved production bugs alongside ongoing feature development, helping keep active client platforms stable and reliable throughout my tenure.

PROJECTS

Besat - Bazaar & Vendor Management Platform (Basatco.ir) | Backend Developer

- Built backend and database architecture for a marketplace platform connecting bazaar organizers with vendors, who rent and manage their own stalls.

Niil - Smart Employee & Student Training Platform (niil.io) | Backend Developer

- Built backend and database architecture for a training and upskilling platform serving employees, students, and other learners, and owned unit testing for the project end-to-end; now live and growing, with roughly 500-700 members after moving from initial development into active use.

Nasim-e Ghesseha - Storytelling Mobile App | Backend Developer

- Designed backend and API architecture for a mobile storytelling application, reaching around 300 users during my time on the project.

Kachar - E-commerce & Tire Service Platform (kacharlife.com) | Backend Development / Code Review

- Delivered backend services for an online tire-sales and car-service e-commerce platform supporting 40,000+ users.

S-Plus - Samsung Support & Training Platform (s-plus.ir) | Backend Development / Code Review

- Contributed backend development and code review for a Samsung product support and training service, an internal company platform with a limited user base.

IranPark - Curbside Vehicle Parking Platform | Backend Developer

- Developed the admin panel and APIs for a curbside vehicle parking platform, handling around 1,000 requests per day.

DoctorTop - Doctor Appointment & Patient Records Platform | Backend Developer

- Built backend services for a doctor-patient platform enabling appointment booking and patient record access/updates by doctors, serving up to 800 users.

CERTIFICATIONS

PHP Laravel Olympiad - Quera, Top Ranking, November 2024 (quera.org/certificate/DU5SkYHO)
